

Figure 1. Map of the United States showing the distribution of a variable across different regions. The map uses a color scale from dark blue (low) to yellow (high). The highest values (yellow) are concentrated in the Northeast, particularly in the New York and Pennsylvania area, and in the Southeast, particularly in the Florida and Georgia area. Moderate values (green) are seen in the Midwest and parts of the West. The lowest values (dark blue) are found in the Mountain West region and parts of the South. The map includes state boundaries and a grid of latitude and longitude lines.
