

Figure 1: A map of the United States showing the distribution of a variable across different regions. The map uses a color scale from dark blue (low values) to yellow (high values). The highest values (yellow) are concentrated in the Northeast, particularly in the New York City area, and in the Southeast, particularly in the Florida peninsula. The Midwest and West Coast show moderate values (green), while the Mountain West and Great Plains regions show the lowest values (dark blue). The map is titled "Figure 1" in the top right corner.
